OnlyCryptoFans.app

0.1 Introduction

OnlyCryptoFans is a blockchain based ecosystem that is designed to facilitate easy tipping of your favorite crypto-influencers in the future. Our goal is to build a social media platform where you can use our tokens to drop tips or alternatively open user-defined hidden material against tokens.

OnlyCryptoFans doesn't charge its content creators.

\$ONCRF is created on cronoschain-network which is hosted by one of the biggest cryptoscene players Crypto.com, which has consistently small gas fees for transfers.

0.2 What makes OnlyCryptoFans unique?

OnlyCryptoFans aims to offer an easy way to give tips and recognition to the biggest names in crypto scene, while utilizing blockchain technology.

Using blockchain facilitates a safe way to cooperate.

Easily accessible social media platform at mobile device application using blockchain and the latest app-creating tools.

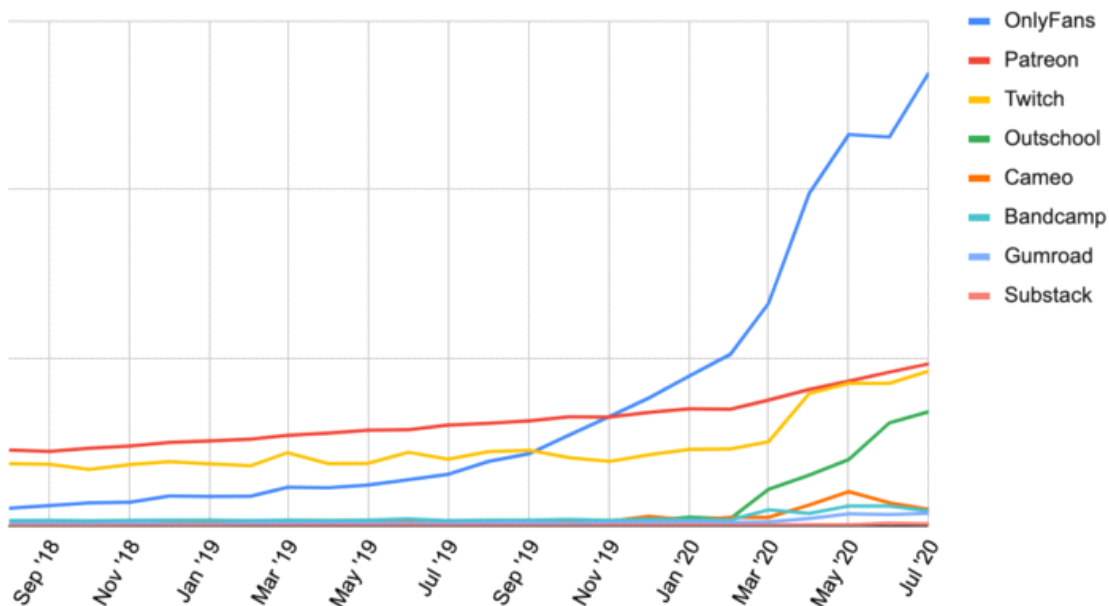

0.3 General statistics from existing industry

Twitch.tv made an estimated \$2.3 billion in revenue in 2020, primarily from subscriptions and in-app purchases. In 2021 Twitch.tv had an average of 2.84 million concurrent viewers. Nine million Twitch.tv users stream on average once a month on the platform. 18.6 billion hours of content was consumed on the platform in 2020.¹

OnlyFans statistics, which is our biggest competitor:

- 170 million users
- 500 000 new users every day
- 1.5 million content creators
- Top creators make on average \$100 000/month
- The average creator makes \$151/month
- The average creator has 21 subscribers
- OnlyFans has paid more than \$2 billion in revenue to its content creators.²

0.4 Difficulties in industry

Social media platform for adults leans heavily into complete anonymity between clients and the service provider. Without complete anonymity, content creators are forced to secure their privacy one way or another, which can increase costs and result in lost revenue. Using blockchain facilitates completely transparent and anonymous payment options, without content creators risking exposing their personal information or payment details, which could fall into wrong hands in case of eg. breach in security.

Many of the currently available payment methods (credit/debit cards, online transactions, PayPal etc.) are often restricted from being used in adult websites, and some payment processing services don't allow using their services in collaboration with adult film industry. A recent example is from December 2020, when VISA and Mastercard stopped allowing transactions on PornHub, when it came to light that the site contained child pornography and videos of non-consensual sexual acts.³

0.5 Payment methods and solutions

People appreciate payment methods that don't leave traces of their activity, especially in case of supporting others financially. Common payment methods usually give out some personal information, like names and information about the bank. OnlyCryptoFans changes everything up, giving you an anonymous option for supporting your favorite content creators.

Our goal is for OnlyCryptoFans to become one of the most used tokens on social media platform, with the sole purpose of being able to easily support content creators with crypto. OnlyCryptoFans users (the holders) will in the future benefit in different ways through various VIP and rewards programs.

Blockchain provides a sense of security to content creators. Many of those that are already in blockchain business know that blockchain in itself is usable in every field. The vision of OnlyCryptoFans is to utilize the minting of non-fungible tokens (NFTs) to secure our users copyrights.

0.6 OnlyCryptoFans tokenomics

Total tokens: 10 000 000 000

Locked for the development team: 2 000 000 000

TEAM TOKENS are locked until (**Thu Mar – 07/03/2024**)
